

# SUPER SHADE

We are always on the lookout for new trees of exceptional merit. We are pleased to offer these promising new shade tree cultivars.

## **Northern Acclaim™ Honeylocust** (*Gleditsia triacanthos* 'Harve')

is a proven performer in cold climates such as the windswept plains of North Dakota where it was selected and performance tested. Developed by Dr. Dale Herman of North Dakota State University, it is rated hardy through USDA Zone 3b. Broadly pyramidal in

shape, it grows to a height of approximately 45 feet with a spread of 35 feet its shape is more upright than most Honeylocusts, similar to Skyline®. Foliage is fine textured and medium green until it turns to rich yellow in autumn.

## **Harvest Gold Linden**

(*Tilia cordata x mongolica* 'Harvest Gold' PP 12232) is extra hardy as well as extra colorful in autumn when its deep green glossy summer leaves turn to bright golden yellow. Fast growth and a pyramidal shape are among its many attributes.

**Emerald Sunshine™ Elm** (*Ulmus propinqua* 'JFS-Bieberich') is a promising new elm cultivar grown from seed collected in China by plantsman Steve Bieberich. Selected for outstanding performance on the arid plains of western Oklahoma, this tree seems to enjoy the hottest summer sun. Strongly textured foliage emerges with red tints and matures to deep, rich green. It is resistant to Dutch Elm Disease and Phloem Necrosis, and has shown good resistance to the feeding of elm leaf beetles. Maturing smaller than most elms, it develops a vase shaped canopy as it reaches about 30 feet in height with a spread of about 25 feet.
