

Choose these new Tupelos for color and performance

Two new selections of Black Tupelo deliver consistently bright red fall color, resistance to leaf spot, and predictable form to this versatile and adaptable North American tree.

Red Rage® Tupelo (*Nyssa sylvatica* ‘Haymanred’) Deep green, high gloss summer foliage turns outrageously bright red with the onset of fall weather. Discovered in southern Indiana, it has all the great features of the species plus good resistance to leaf spot and dependably brilliant fall color! Its upright pyramidal shape makes it an excellent candidate for street tree use. Height is approximately 35 feet, with a spread of about 20 feet. USDA Zone 5.

Forum® Black Tupelo (*Nyssa sylvatica* ‘NXSXF’ PP 11391) has an upright, conical growth habit and a strong central leader. Upright branches bear a dense canopy of lustrous dark green leaves as it reaches about 45 feet in height with a spread of 25 feet. Selected in Georgia and rated hardy through USDA Zone 6, its predictably narrow form give this selection great promise as an urban landscape tree.
